## Job Application for Frontend Developer

Dear Mr./Ms./Dr. LastName,

With reference to an advertisement on the Dayjob.com website, I am applying for the post of Front End Developer with your company.

## About Me

As a child, I loved connecting with people by playing games and solving puzzles. I turned my hobby into a profession and became a computer scientist. During my studies, I was interested in game-based learning. I worked on a web application for my BSc project and I realized that the core of my motivation is that my work has a societal impact. That is why I chose to work at a small company, EagleScience, to contribute to socially relevant projects. My next step was an international company, called WORTH, where I worked on an application that helps the Dutch government process visa applications for thousands of people. I was born in Greece, but I have also lived and worked in the Netherlands. As a green card holder today, I am beginning the next step of my life's journey. Still pushing to make a difference and connect with people, one interaction at a time. Inspired by this mindset, I am looking for projects that have social value.

## Why COMPANYNAME?

Because it is awesome

## Why Me?

My three years of experience as a frontend/fullstack developer, has honed my "INSERT TECH" skills, as well as my interpersonal capacity. In my position as a frontend developer for WORTH Internet Systems, I acted as a front-end lead for one year. My duties involved coding, code reviewing, maintaining good practices, unit testing, helping the UX designer and product owner to make wise decisions when it comes to frontend features that were requested and much more. While a fullstack developer for EagleScience I participated in most areas of development like, frontend, backend, devops, scrum master and tester. I believe my values match xxx's goals and

Sincerely,

**Christos Tselepidas**
